

Crisp. Delicious. Air cooled.

Great foods deserve great cooling. Cold rooms equipped with AirMax II unit coolers from Alfa Laval are ideal for sensitive fruits, meats and cheeses.

They get the balanced, stable climate they need to stay as delicious as they were at the outset. The AirMax family is designed for HFC, water or water /glycol and delivers up to 200 kW of cooling power at temperatures from -40°C and +20°C. The result is – you guessed it – delicious.
