

# The power of G

Answering the global call for ethanol

Here's great news for fuel ethanol plants: a brand new Alfa Laval decanter for the 50-110 MGY plant capacity. At a whopping 3,500 G, the SG2-700 decanter produces the driest stillage and the clearest centrate in its class.

Yet it uses no more energy than a much smaller unit.

And with the renowned reliability of all Alfa Laval spent-grain decanters, the SG2-700 curbs maintenance costs as well. Sending the power of G straight to your bottom line.
