

Implants made easy.

How many bits and pieces do you really need to perform top-class implant surgery?

A thousand? Two thousand?

The Ospol implant system consists of 46 components and instruments. In total.

Add to that an award-winning packaging and logistics system that neither looks nor handles like anything you've ever seen or handled before.

Yet it dramatically simplifies your work and makes your practice a more organized place.

When an implant system is as uniquely well-conceived, well-designed and well-manufactured as Ospol's, you'd expect the price tag to reflect that. Right?

Not quite.

During an introduction period, the Ospol implant screw is priced at a surprisingly low €95.

Including all the extras: The distinctive packaging. The storage system. And the web-based logistics.

All for €95.

Big-brand implants are far more

costly. But offer no clinical advantages over Ospol implants. None. In fact, when you consider the simplicity and user-friendliness of Ospol, it's rather the other way around, wouldn't you say?
